

You are a curious person. Why is that?

Research shows that people like you are willing to give up **money** and even expend **physical effort** to **satisfy curiosity**. This has led to the view that the brain processes **information** like a **reward** and we **intrinsically value information**.

But clicking a **random link on the internet** involves a certain degree of **risk**. What if it involved **more risk**?

How curious are people then? And why does the answer involve **ostriches**?

Satisfy your curiosity:

Cognition II Fast Talks on Sunday morning.
